Plastic Art and
Pure Plastic Art

Part I

Although Art is fundamentally everywhere and always the same, nevertheless two main human inclinations, diametrically opposed to each other, appear in its many and varied expressions. One aims at the direct creation of universal beauty, the other at the aesthetic expression of oneself; in other words, of that which one thinks and experiences. The first aims at representing reality objectively, the second subjectively. Thus we see in every work of figurative art the desire, objectively to represent beauty, solely through form and color, in mutually balanced relations, and, at the same time, an attempt to express that which these forms, colors, and relations arouse in us. This latter attempt must of necessity result in an individual expression which veils the pure representation of beauty. Nevertheless, both the two opposing elements (universal-individual) are indispensable if the work is to arouse emotion. Art had to find the right solution. In spite of the dual nature of the creative inclinations, figurative art has produced a harmony through a certain coordination between objective and subjective expression. For the spectator, however, who demands a pure representation of beauty, the individual expression is too predominant. For the artist, the search for a unified expression through the balance of two opposites has been, and always will be, a continual struggle.

Throughout the history of culture, art has demonstrated that universal beauty does not arise from the particular character of the form, but from the dynamic rhythm of its inherent relationships, or—in a composition—from the mutual relations of forms. Art has shown that it is a question of determining the relations. It has revealed that the forms exist only for the creation of relationships; that forms create relations and that relations create forms. In this duality of forms and their relations neither takes precedence.

The only problem in art is to achieve a balance between the subjective and the objective. But it is of the utmost importance that this problem should be solved, in the realm of plastic art—technically, as it were—and not in the realm of thought. The work of art must be "produced," "constructed." One must create as objective as possible a representation of forms and relations. Such work can never be empty because the opposition of its constructive elements and its execution arouse emotion.

If some have failed to take into account the inherent character of the form and have forgotten that this—untransformed—predominates, others have overlooked the fact that an individual expression does not become a universal expression through figurative representation, which is based on our conception of feeling, be it classical, romantic, religious, surrealistic. Art has shown that universal expression can only be created by a real equation of the universal and the individual.

Gradually art is purifying its plastic means and thus bringing out the relationships between them. Thus, in our day two main tendencies appear: the one maintains the figuration, the other eliminates it. While the former employs more or less complicated and particular forms, the latter uses simple and neutral forms, or, ultimately, the free line and the pure color. It is evident that the latter (nonfigurative art) can more easily and thoroughly free itself from the domination of the subjective than can the figurative tendency; particular forms and colors (figurative art) are more easily exploited than neutral forms. It is, however, necessary to point out, that the definitions "figurative" and "nonfigurative" are only approximate and relative. For every form, even every line, represents a figure; no form is absolutely neutral. Clearly, everything must be relative, but, since we need words to make our concepts understandable, we must keep to these terms.

Among the different forms we may consider those as being neutral which have neither the complexity nor the particularities possessed by the natural forms or abstract forms in general. We may call those neutral which do not evoke individual feelings or ideas. Geometrical forms being so profound an abstraction of form may be regarded as neutral; and on account of their tension and the purity of their outlines they may even be preferred to other neutral forms.

If, as a conception, nonfigurative art has been created by the mutual interaction of the human duality, this art has been realized by the mutual interaction of constructive elements and their inherent relations. This process consists in mutual purification; purified constructive elements set up pure relationships, and these in their turn demand pure constructive elements. Figurative art of today is the outcome of figurative art of the past, and nonfigurative art is the outcome of the figurative art of today. Thus the unity of art is maintained.

If nonfigurative art is born of figurative art, it is obvious that the two factors of human duality have not only changed, but have also approached one another toward a mutual balance, toward unity. One can rightly speak of an evolution in plastic art. It is of the greatest importance to note this fact, for it reveals the true way of art; the only path along which we can advance. Moreover, the evolution of the plastic arts shows that the dualism which has manifested itself in art
achieve one and the same end by different means. In plastic art this is an impossibility. In plastic art it is necessary to choose constructive means which are of one piece with that which one wants to express.

Art makes us realize that there are fixed laws which govern and point to the use of the constructive elements, of the composition and of the inherent interrelationships between them. These laws may be regarded as subsidiary laws to the fundamental law of equivalence which creates dynamic equilibrium and reveals the true content of reality.

Part II

We live in a difficult but interesting epoch. After a seculiar culture, a turning point has arrived; this shows itself in all the branches of human activity. Limiting ourselves here to science and art, we notice that just as in medicine some have discovered the natural laws relating to physical life, in art some have discovered the artistic laws relating to plastics. In spite of all opposition, these facts have become movements. But confusion still reigns in them. Through science we are becoming more and more conscious of the fact that our physical state depends in great measure on what we eat, on the manner in which our food is arranged and on the physical exercise which we take. Through art we are becoming more and more conscious of the fact that the work depends in large measure on the constructive elements which we use and on the construction which we create. We will gradually realize that we have not hitherto paid sufficient attention to constructive physical elements in their relation to the human body, nor to the constructive plastic elements in their relation to art. That which we eat has deteriorated through a refinement of natural produce. To say this, appears to invoke a return to a primitive natural state and to be in opposition to the exigencies of pure plastic art, which degenerates precisely through figurative trappings. But a return to pure natural nourishment does not mean a return to the state of primitive man; it means on the contrary that cultured man obeys the laws of nature discovered and applied by science.

Similarly in nonfigurative art, to recognize and apply natural laws is not evidence of a retrograde step; the pure abstract expression of these laws proves that the exponent of nonfigurative art associates himself with the most advanced progress and the most cultured minds, that he is an exponent of denaturalized nature, of civilization.

In life, sometimes the spirit has been overemphasized at the expense of the body, sometimes one has been preoccupied with the body and neglected the spirit; similarly in art, content and form have alternately been overemphasized or neglected because their inseparable unity has not been clearly realized.

To create this unity in art balance of the one and the other must be created.
It is not enough to explain the value of a work of art in itself; it is above all necessary to show the place which a work occupies on the scale of the evolution of plastic art. Thus in speaking of art, it is not permissible to say "this is how I see it" or "this is my idea." True art like true life takes a single road.

The laws which in the culture of art have become more and more determinate are the great hidden laws of nature which art establishes in its own fashion. It is necessary to stress the fact that these laws are more or less hidden behind the superficial aspect of nature. Abstract art is therefore opposed to a natural representation of things. But it is not opposed to nature as is generally thought. It is opposed to the raw primitive animal nature of man, but it is one with true human nature. It is opposed to the conventional laws created during the culture of the particular form but it is one with the laws of the culture of pure relationships.

First and foremost there is the fundamental law of dynamic equilibrium which is opposed to the static equilibrium necessitated by the particular form.

The important task then of all art is to destroy the static equilibrium by establishing a dynamic one. Nonfigurative art demands an attempt of what is a consequence of this task, the destruction of particular form and the construction of a rhythm of mutual relations, of mutual forms or free lines. We must bear in mind, however, a distinction between these two forms of equilibrium in order to avoid confusion: for when we speak of equilibrium pure and simple we may be for; and at the same time against, a balance in the work of art. It is of the greatest importance to note the destructive-constructive quality of dynamic equilibrium. Then we shall understand that the equilibrium of which we speak in nonfigurative art is not without movement of action but is on the contrary a continual movement. We then understand also the significance of the name "constructive art."

The fundamental law of dynamic equilibrium gives rise to a number of other laws which relate to the constructive elements and their relations. These laws determine the manner in which dynamic equilibrium is achieved. The relations of position and those of dimension both have their own laws. Since the relation of the rectangular position is constant, it will be applied whenever the work demands the expression of stability; to destroy this stability there is a law that relations of a changeable dimension-expression must be substituted. The fact that all the relations of position except the rectangular one lack that stability, also creates a law which we must take into account if something is to be established in a determinate manner. Too often right and oblique angles are arbitrarily employed. All art expresses the rectangular relationship even though this may not be in a determinate manner; first by the height and width of the work and its constructive forms, then by the mutual relations of these forms. Through the clarity and simplicity of neutral forms, nonfigurative art has made the rectangular relation more and more determinate until, finally, it has established it through free lines which intersect and appear to form rectangles.

As regards the relations of dimension, they must be varied in order to avoid repetition. Although, as compared with the stable expression of the rectangular relationship, they belong to individual expression, it is precisely they that are most appropriate for the destruction of the static equilibrium of all form. By offering him a freedom of choice the relations of dimension present the artist with one of the most difficult problems. And the closer he approaches the ultimate consequence of his art the more difficult is his task.

Since the constructive elements and their mutual relations form an inseparable unity, the laws of the relations govern equally the constructive elements. These, however, have also their own laws. It is obvious that one cannot achieve the same expression through different forms. But it is often forgotten that varied forms or lines achieve—in form—altogether different degrees in the evolution of plastic art. Beginning with natural forms and ending with the most abstract forms, their expression becomes more profound. Gradually form and line gain in tension. For this reason the straight line is a stronger and more profound expression than the curve.

In pure plastic art the significance of different forms and lines is very important; it is precisely this fact which makes it pure.

In order that art may be really abstract, in other words, that it should not represent relations with the natural aspect of things, the law of the denaturalization of matter is of fundamental importance. In painting, the primary color that is as pure as possible realizes this abstraction of natural color. But color is, in the present state of technique, also the best means for denaturalizing matter in the realm of abstract constructions in three dimensions; technical means are as a rule insufficient.

All art has achieved a certain measure of abstraction. This abstraction has become more and more accentuated until in pure plastic art not only a transformation of form but also of matter—a be it through technical means or through color—a more or less neutral expression is attained.

According to our laws, it is a great mistake to believe that one is practicing nonfigurative art by merely achieving neutral forms or free lines and determinate relations. For in composing these forms one runs the risk of a figurative creation, that is to say one or more particular forms.

Nonfigurative art is created by establishing a dynamic rhythm of determinate mutual relations which excludes the formation of any particular form. We note thus, that to destroy particular form is only to do more consistently what all art has done.
The dynamic rhythm which is essential in all art is also the essential element of a nonfigurative work. In figurative art this rhythm is veiled.

Yet we all pay homage to clarity.

The fact that people generally prefer figurative art (which creates and finds its continuation in abstract art) can be explained by the dominating force of the individual inclination in human nature. From this inclination arises all the opposition to art which is purely abstract.

In this connection we note first the naturalistic conception and the descriptive or literary orientation: both a real danger to purely abstract art. From a purely plastic point of view, until nonfigurative art, artistic expression has been naturalistic or descriptive. To have emotion aroused by pure plastic expression one must abstract from figuration and so become "neutral." But, with the exception of some artistic expressions (such as Byzantine art) there has not been the desire to employ neutral plastic means, which would have been much more logical than to become neutral oneself in contemplating a work of art. Let us note, however, that the spirit of the past was different from the spirit of our own day, and that it is only tradition which has carried the past into our own time. In past times when one lived in contact with nature and when man himself was more natural than he is today, abstraction from figuration in thought was easy; it was done unconsciously. But in our more or less denaturalized period, such abstraction becomes an effort.

However, that may be, the fact that figuration is a factor which is unduly taken into account, and whose abstraction in the mind is only relative, proves that today even great artists regard figuration as indispensable. At the same time these artists are already abstracting from figuration to a much greater extent than has been done before. More and more, not only the uselessness of figuration, but also obstacles which it creates, will become obvious. In this search for clarity, nonfigurative art develops.

There is, however, one tendency which cannot forgo figuration without losing its descriptive character. That is Surrealism. Since the predominance of individual thought is opposed to pure plastics it is also opposed to nonfigurative art. Born of a literary movement, its descriptive character demands figuration. However, purified or deformed it may be, figuration veils pure plastics. There are, it is true, Surrealist works whose plastic expression is very strong and of a kind that if the work is observed at a distance, i.e., if the figurative representation is abstracted from, they arouse emotion by form, color, and their relations alone. But if the purpose was nothing but plastic expression, why then use figurative representation? Clearly, there must have been the intention to express something outside the realm of pure plastics. This of course is often the case even in abstract art.

1. As regards these works we must note that, lacking a dynamic rhythm, they remain, in spite of the profound expression of forms, more or less ornamental.

There, too, there is sometimes added to the abstract forms something particular, even without the use of figuration; through the color or through the execution, a particular idea or sentiment is expressed. There it is generally not the literary inclination but the naturalistic inclination which has been at work. It must be obvious that if one evokes in the spectator the sensation of, say, the sunlight or moonlight, of joy or sadness, or any other determinate sensation, one has not succeeded in establishing universal beauty, one is not purely abstract.

As for Surrealism, we must recognize that it deepens feeling and thought, but since this deepening is limited by individualism it cannot reach the foundation, the universal. So long as it remains in the realm of dreams, which are only a rearrangement of the events of life, it cannot touch true reality. Through a different composition of the events of life, it may remove their ordinary course but it cannot purify them. Even the intention of freeing life from its conventions and from everything which is harmful to the true life can be found in Surrealist literature. Nonfigurative art is fully in agreement with this intention but it achieves its purpose; it frees its plastic means and its art from all particularity. These names, however, of these tendencies, are only indications of their conceptions; it is the realization which matters. With the exception of nonfigurative art, there seems to have been a lack of realization of the fact that it is possible to express oneself profoundly and humanly by plastics alone, that is, by employing a neutral plastic means without the risk of falling into decoration or ornament. Yet all the world knows that even a single line can arouse emotion. But although one sees—and this is the artist's fault—few nonfigurative works which live by virtue of their dynamic rhythm and their execution, figurative art is no better in this respect. In general, people have not realized that one can express our very essence through neutral constructive elements; that is to say, we can express the essence of art. The essence of art of course is not often sought. As a rule, individualist human nature is so predominant, that the expression of the essence of art through a rhythm of lines, colors, and relationships appears insufficient. Recently, even a great artist has declared that "complete indifference to the subject leads to an incomplete form of art."

But everybody agrees that art is only a problem of plastics. What good then is a subject? It is to be understood that one would need a subject to expound something named "Spiritual riches, human sentiments and thoughts." Obviously, all this is individual and needs particular forms. But at the root of these sentiments and thoughts there is one thought and one sentiment: these do not easily define themselves and have no need of analogous forms in which to express themselves. It is here that neutral plastic means are demanded.

For pure art then, the subject can never be an additional value, it is the line, the color, and their relations which must "bring into play the
whole sensual and intellectual register of the inner life . . . " not the subject. Both in abstract art and in naturalistic art color expresses itself “in accordance with the form by which it is determined,” and in all art it is the artist’s task to make forms and colors living and capable of arousing emotion. If he makes art into an “algebraic equation” that is no argument against the art, it only proves that he is not an artist.

If all art has demonstrated that to establish the force, tension and movement of the forms, and the intensity of the colors of reality, it is necessary that these should be purified and transformed; if all art has purified and transformed and is still purifying and transforming these forms of reality and their mutual relations, if all art is thus a continually deepening process: why then stop halfway? If all art aims at expressing universal beauty, why establish an individualist expression? Why then not continue the sublime work of the Cubists? That would not be a continuation of the same tendency, but on the contrary, a complete break-away from it and all that has existed before it. That would only be going along the same road that we have already travelled.

Since Cubist art is still fundamentally naturalistic, the break which pure plastic art has caused consists in becoming abstract instead of naturalistic in essence. While in Cubism, from a naturalistic foundation, there sprang forcibly the use of plastic means, still half object, half abstract, the abstract basis of pure plastic art must result in the use of purely abstract plastic means.

In removing completely from the work all objects, “the world is not separated from the spirit,” but is on the contrary put into a balanced opposition with the spirit, since the one and the other are purified. This creates a perfect unity between the two opposites. There are, however, many who imagine that they are too fond of life, particular reality, to be able to suppress figuration, and for that reason they still use in their work the object or figurative fragments which indicate its character. Nevertheless, one is well aware of the fact that in art one cannot hope to represent in the image things as they are, nor even as they manifest themselves in all their living brilliance. The Impressionists, Divisionists, and Pointillists have already recognized that. There are some today who, recognizing the weakness and limitation of the image, attempt to create a work of art through the objects themselves, often by composing them in a more or less transformed manner. This clearly cannot lead to an expression of their content nor of their true character. One can more or less remove the conventional appearance of things (Surrealism), but they continue nevertheless to show their particular character and to arouse in us individual emotions. To love things in reality is to love them profoundly; it is to see them as a microcosmos in the macrocosmos. Only in this way can one achieve a universal expression of reality. Precisely on account of its profound love for things, nonfigurative art does not aim at rendering them in their particular appearance.

Precisely by its existence nonfigurative art shows that “art” continues always on its true road. It shows that “art” is not the expression of the appearance of reality such as we see it, nor of the life which we live, but that it is the expression of true reality and true life . . . indefinable but realizable in plastics.

Thus we must carefully distinguish between two kinds of reality; one which has an individual and one which has a universal appearance. In art the former is the expression of space determined by particular things or forms, the latter establishes expansion and limitation—the creative factors of space—through neutral forms, free lines, and pure colors. While universal reality arises from determinate relations, particular reality shows only veiled relations. The latter must obviously be confused in just that respect in which universal reality is bound to be clear. The one is free, the other is tied to individual life, be it personal or collective. Subjective reality and relatively objective reality: this is the contrast. Pure abstract art aims at creating the latter, figurative art the former.

It is astonishing, therefore, that one should reproach pure abstract art with not being “real,” and that one should envisage it as “arising from particular ideas.”

In spite of the existence of nonfigurative art, one is talking about art today as if nothing determinate in relation to the new art existed. Many neglect the real nonfigurative art, and looking only at the fumbling attempts and at the empty nonfigurative works which today are appearing everywhere, ask themselves whether the time has not arrived “to integrate form and content” or “to unify thought and form.” But one should not blame nonfigurative art for that which is only due to the ignorance of its very content. If the form is without content, without universal thought, it is the fault of the artist. Ignoring that fact, one imagines that figuration, subject, particular form, could add to the work that which the plastic itself is lacking. As regards the “content” of the work, we must note that our “attitude with regard to things, our organized individuality with its impulses, its actions, its reactions when in contact with reality, the lights and shades of our spirit,” etc., certainly do modify the nonfigurative work, but they do not constitute its content. We repeat that its content cannot be described, and that it is only through pure plastics and through the execution of the work that it can be made apparent.

Through this indeterminate content, the nonfigurative work is “fully human.” Execution and technique play an important part in the aim of establishing a more or less objective vision which the essence of the nonfigurative work demands. The less obvious the artist’s hand the more objective will be his work. This fact leads to a preference for a more or less mechanical execution or to the employment of materials produced by industry. Hitherto, of course, these materials have been imperfect from the point of view of art. If these materials and their
colors were more perfect and if a technique existed by which the artist could easily cut them up in order to compose his work as he conceives it, an art more real and more objective in relation to life than painting would arise. All these reflections evoke questions which have already been asked many years ago, mainly: is art still necessary and useful for humanity? Is it not even harmful to its progress? Certainly the art of the past is superfluous to the new spirit and harmful to its progress: just because of its beauty it holds many people back from the new conception. The new art is, however, still very necessary to life. In a clear manner it establishes the laws according to which a real balance is reached. Moreover, it must create among us a profoundly human and rich beauty realized not only by the best qualities of the new architecture, but also by all that the constructive art in painting and sculpture makes possible.

But although the new art is necessary, the mass is conservative. Hence these cinemas, these radios, these bad pictures which overwhelm the few works which are really of our era.

It is a great pity that those who are concerned with the social life in general do not realize the utility of pure abstract art.Wrongly influenced by the art of the past, the true essence of which escapes them, and of which they only see that which is superfluous, they make no effort to know pure abstract art. Through another conception of the word "abstract," they have a certain horror of it. They are vehemently opposed to abstract art because they regard it as something ideal and unreal. In general they use art as propaganda for collective or personal ideas, thus as literature. They are both in favor of the progress of the mass and against the progress of the elite, thus against the logical march of human evolution. Is it really to be believed that the evolution of the mass and that of the elite are incompatible? The elite rises from the mass; is it not therefore its highest expression?

To return to the execution of the work of art, let us note that it must contribute to a revelation of the subjective and objective factors in mutual balance. Guided by intuition, it is possible to attain this end. The execution is of the greatest importance in the work of art; it is through this, in large part, that intuition manifests itself and creates the essence of the work.

It is therefore a mistake to suppose that a nonfigurative work comes out of the unconscious, which is a collection of individual and prenatal memories. We repeat that it comes from pure intuition, which is at the basis of the subjective-objective dualism. It is, however, wrong to think that the nonfigurative artist finds impressions and emotions received from the outside useless, and regards it even as necessary to fight against them. On the contrary, all that the nonfigurative artist receives from the outside is not only useful but indispensable, because it arouses in him the desire to create that which he only vaguely feels and which he could never represent in a true manner without the contact with visible reality and with the life which surrounds him. It is precisely from this visible reality that he draws the objectivity which he needs in opposition to his personal subjectivity. It is precisely from this visible reality that he draws his means of expression: and, as regards the surrounding life, it is precisely this which has made his art nonfigurative.

That which distinguishes him from the figurative artist is the fact that in his creations he frees himself from individual sentiments and from particular impressions which he receives from outside, and that he breaks loose from the domination of the individual inclination within him.

It is therefore equally wrong to think that the nonfigurative artist creates through "the pure intention of his mechanical process," that he makes "calculated abstractions," and that he wishes to "suppress sentiment not only in himself but also in the spectator." It is a mistake to think that he retires completely into his system. That which is regarded as a system is nothing but constant obedience to the laws of pure plastics, to necessity, which art demands from him. It is thus clear that he has not become a mechanic, but that the progress of science, of technique, of machinery, of life as a whole, has only made him into a living machine, capable of realizing in a pure manner the essence of art. In this way, he is in his creation sufficiently neutral, that nothing of himself or outside of him can prevent him from establishing that which is universal. Certainly his art is art for art's sake... for the sake of the art which is form and content at one and the same time.

If all real art is "the sum total of emotions aroused by purely pictorial means" his art is the sum of the emotions aroused by plastic means.

It would be illogical to suppose that nonfigurative art will remain stationary, for this art contains a culture of the use of new plastic means and their determinate relations. Because the field is new there is all the more to be done. What is certain is that no escape is possible for the nonfigurative artist; he must stay within his field and march toward the consequence of his art.

This consequence brings us, in a future perhaps remote, toward the end of art as a thing separated from our surrounding environment, which is the actual plastic reality. But this end is at the same time a new beginning. Art will not only continue but will realize itself more and more. By the unification of architecture, sculpture, and painting, a new plastic reality will be created. Painting and sculpture will not manifest themselves as separate objects, nor as "mural art" which destroys architecture itself, nor as "applied" art, but being purely constructive will aid the creation of a surrounding not merely utilitarian nor rational but also pure and complete in its beauty.
