In his practice, spanning five decades, Stano Filko has developed an expansive body of work that encompasses philosophical, theoretical, and imaginative realms. His work is characterized by the weaving together of several elements: translation, etymology, and linguistics. Filko has devised diachronic charts of language, with English on the left, Slovak in the center, and German on the right—a metaphysical landscape that reflects his profound interest in the conceptual, the sociopolitical, and the cosmic. His work has been classified into a five-color system: red, green, blue, white, or black—reflecting the conceptual, the sociopolitical, the cosmic, the transcendent, or the ego. Filko has contributed to the field of metaphysical concepts, initially classified his work according to a five-color system: red, green, blue, white, or black (indigo)—a spectrum that correlated to the conceptual thrusts of his work, designating whether its central concern is the erotic, the sociopolitical, the cosmic, the transcendent, or the ego. Filko has not only submitted his practice but also his own name to these schematic principles. His book _Projekt myslenia – mentality / Project of Thinking – Mentality_ presented a series of permutations of his name relating to stages in his life—spanning a five-decade period, from his birth to the present. Filko’s text below broaches the concept of the fourth dimension, a mathematical theory that posits time as a physical coordinate akin to length, width, and height, and which bears great influence on a generation of artists in the early twentieth century, including the Cubists, Dadaists, and Surrealists. Philosophically, fourth-dimensionalism argues that beings have distinct identities at different points in time, and here Filko makes use of the theory to chart the past, present, and future of the galaxy.

**NOTES ON PAST, PRESENT, & FUTURE**

**STANO FILKO**

**CA. 1960**

**Introduction**

Filko's text below broaches the concept of the fourth dimension, a mathematical theory that posits time as a physical coordinate akin to length, width, and height, and which bears great influence on a generation of artists in the early twentieth century, including the Cubists, Dadaists, and Surrealists. Philosophically, fourth-dimensionalism argues that beings have distinct identities at different points in time, and here Filko makes use of the theory to chart the past, present, and future of the galaxy.

---

**A. PAST**

1. **Universe, time-space – COSMOLOGY – 4TH DIMENSION**

   - In the universe, past, present, and future unit in the temporal sense.

2. **Our position and dimension.**

   - Let us imagine a spatial model of the neighboring stars in which the Sun is a 7 cm (2.7 in) diameter sphere, and in which a 0.5 cm (0.2 in) diameter Earth exists at a distance of 50 m (164 ft). The last planet in the solar system, Pluto, revolves on an orbit with a radius of 300 meters (984 ft). The size of such a model of the solar system is 600 meters (1968.5 feet). From this model, the next nearest star is 2.030m (6626.7 miles) away. On this scale, the galaxy is 75 million (46.6 ± 2) meters in breadth.

3. **Possibilities of life in the universe.**

   - In 1961, a conference took place in Green Bank [WV] on the question of extraterrestrial civilizations. At the conclusion of the conference, delegates agreed on the boundaries of the solar system: 600 meters (1968.5 feet) from its center, the next nearest star is 2.030m (6626.7 miles) away. On this scale, the galaxy is 75 million (46.6 ± 2) meters in breadth.

---

**B. PRESENT**

1. **Restructuring of Earth – TIME-SPACE – COSMOLOGY – 4TH DIMENSION**

   - Perfect organization of society and the environment will emerge.
   - The idea will become the most important thing. Material things will become a matter of choice.
   - The Earth's surface will become a protected area—a new, artificial environment will be created on the Earth's surface. The protected area will consist of former civilizations: highways, cities, forests, etc. The idea of the Earth's core, the Sun, light, ocean, and their essence.
   - Use of the energy of the Earth's core, the Sun, light, ocean, and their essence. Abandonment of previous methods of energy generation.

2. **Restructuring of the solar system.**

   - Bank solars in the solar system will gradually begin to disappear.
   - Construction of artificial environments on individual planets.
   - Creation of artificial planets from interplanetary construction material.
   - Regular interplanetary travel.
   - Use of new types of energy.
   - Gradual intervention into the genetic development of Man.
   - New methods of storage and transmission of information and its accessibility to everyone.
   - Control of terrestrial gravity, creation of a new Earth.
   - Allowing the restructuring of the Earth, human civilization will begin settling on other planets in our solar system.

---

**C. FUTURE – TIME-SPACE – COSMOLOGY – 4TH DIMENSION**

1. **Cooperation with civilizations in our galaxy.**

   - The super-technological civilization will be prepared for contact with extraterrestrial civilizations.
   - The second phase of restructuring the solar system will begin in cooperation with other civilizations.

2. **Restructuring of our galaxy.**

   - Transforming the galaxy into a supergalactic super-civilization.
   - Intergalactic super-civilizations will emerge.
   - The stage of transition into the anti-universe will be reached.
   - The galaxy will become an enormous transmitter of thinking energy, which will be distributed many times faster than the speed of light.
   - The thinking energy will organize the galaxy and the intergalactic spaces.

3. **Cooperation with other galaxies.**

   - The thinking energy of extraterrestrial galaxies will create only in cosmic super-time.
   - Time and space will become distinct from the typical time-space.
   - Intergalactic super-civilizations will emerge.
   - The stage of transition into the anti-universe will be reached.
