**CLIMATE CHANGE AND ART**

A reframing of 'managed displacement'. A belief in the liveliness of place as a site of resistance
drives the reconsideration of a series of social issues in which the term 'green fascism' is commonly used to express a form of ecological concerns.

**VITAL MATERIALISM**

Green fascism is the notion that the current state of nature is evil and requires the reversal of capitalist dynamics. This pejorative term is associated with those who claim that the term 'ecological equilibrium' is an illusion. The term is also used to express a belief in the inevitability of ecological change, which can be either beneficial or catastrophic.

**GREEN FASCISM**

An Atlantic article in 2012 called upon by individuals politically and economically anxious that environmental policies are overemphasised and will be used to 'destroy the free market'. This is a call for a return to free-market capitalism, where the government plays no role in regulating the economy.

**ANNALIS TOLAND**

The article 'The Peasants' War' by Annalis Toland discusses the growth in the number of farmers and their families who are displaced due to climate change. The article explores the ways in which farmers and their families are affected by climate change and the challenges they face in adapting to new conditions.
