nate of the traditional ingredients of his medium and still produce art? Minimal Art becomes the Minimal Style, and the Minimal Style relates to a larger tendency that might be termed the Minimal Sensibility, a Quixotic search for an essence, perhaps more among art writers than artists, in spite of Wittgenstein (a philosopher much in favor with Minimalists). Other examples in other media would be Robbe-Grillet's so-called elimination of psychology, character, and traditional narrative form from fiction; John Cage's elimination of traditional instruments, notation, and "composition" from music; and in poetry, the nonrelational poems of the Concretists and Aram Saroyan's witty one-word poems. In the Underground Cinema we have no-talking, no-acting, no-editing, no-motion motion pictures, loop films, strobe films, and even films made without film.

Paradoxically, the closer an artist gets to the mythological "essence" of his particular medium the faster his medium becomes something else. Frank Stella's shaped-canvases become a kind of flat sculpture for the wall. Cage's "music" becomes theatre. Concretist poems become graphic art. Prose becomes poetry or music. Film becomes a kind of projected painting. Architecture as it tries more and more to be simply architecture becomes sculpture. And sculpture as it strives for "sculptureness" becomes architecture or merely interior design. This paradoxical "media transposition" indicates perhaps that just as there is no ideal gameness that relates all games, there is no ideal art or essence of painting or sculpture, no "nature." —"A Minimal Future?" Arts, March, 1967.

A QUASI SURVEY OF SOME "MINIMALIST" TENDENCIES IN THE QUANTITATIVELY MINIMAL DANCE ACTIVITY MIDST THE PLETHORA, OR AN ANALYSIS OF TRIO A by Yvonne Rainer

Yvonne Rainer is one of the major figures of the highly experimental and influential Judson Dance Theatre in New York. In this essay based on her dance in five parts called The Mind Is a Muscle, she discusses ideas concerning smoothness of continuity in dance. Repetition, phrasing, and energy are redefined; formal content and progression in dance are challenged. As Kenneth King points out: "What the new dance-theater does is re-program symbolic actions, subjects, and movement. Dance need no longer be a minor art with segregated specialization of mere movement."

Miss Rainer was born in San Francisco in 1934, and has performed her works in several American cities, as well as in Europe. Her most recent choreography includes The Mind Is a Muscle and Carriage Discreteness, the latter being a work for twelve performers using electronic equipment devised by Bell Laboratory scientists, which was presented at the 69th Regiment Armory in New York as part of the series called "Nine Evenings: Theatre and Engineering."

Although the benefit to be derived from making a one-to-one relationship between aspects of so-called minimal sculpture and recent dancing is questionable, I have drawn up a chart that does exactly that. Those who need alternatives to subtle distinction-making will be elated, but nevertheless such a device may serve as a shortcut to ploughing through some of the things that have been happening in a specialized area of dancing and once stated can be ignored or culled from at will.

It should not be thought that the two groups of elements are mutually exclusive ("eliminate" and "substitute"). Much work being done today—both in theatre and art—has concerns in both categories. Neither should it be thought that the type of dance I shall discuss has been influenced exclusively by art. The changes in theatre and dance reflect changes in ideas about man and his environment that have affected all the arts. That dance should reflect these changes at all is of interest, since for obvious reasons it has always been the most isolated and inbred of the arts. What is perhaps unprecedented in the short history of the modern dance is the close correspondence between concurrent developments in dance and the plastic arts.

Isadora Duncan went back to the Greeks; Humphrey and Graham\(^1\) used primitive ritual and/or music for structuring, and although the people who came out of the Humphrey-Graham companies and were active during the thirties and forties shared socio-political concerns and activity in common with artists of the period, their work did not reflect any direct influence from or dialogue with the art so much as a reaction to the time. (Those who took off in their own directions in the forties and fifties—Cunningham, Shearer, Litz, Marsicano, et al.—must be appraised individually. Such a task is beyond the scope of this article.) The one previous area of correspondence might be German Expressionism and Mary Wigman and her followers, but photographs and descriptions of the work show little connection.

Within the realm of movement invention—and I am talking for the time being about movement generated by means other than

\(^1\)In the case of Graham, it is hardly possible to relate her work to anything outside of theatre, since it was usually dramatic and psychological necessity that determined it.
accomplishment of a task or dealing with an object—the most impressive change has been in the attitude to phrasing, which can be defined as the way in which energy is distributed in the execution of a movement or series of movements. What makes one kind of movement different from another is not so much variations in arrangements of parts of the body as differences in energy investment.

It is important to distinguish between real energy and what I shall call “apparent” energy. The former refers to actual output in terms of physical expenditure on the part of the performer. It is common to hear a dance teacher tell a student that he is using “too much energy” or that a particular movement does not require “so much energy.” This view of energy is related to a notion of economy and ideal movement technique. Unless otherwise indicated, what I shall be talking about here is “apparent” energy, or what is seen in terms of motion and stillness rather than of actual work, regardless of the physiological or kinesthetic experience of the dancer. The two observations—that of the performer and that of the spectator—do not always correspond. A vivid illustration of this is my Trio A: Upon completion two of us are always dripping with sweat while the third is dry. The correct conclusion to draw is not that the dry one is expending less energy, but that the dry one is a “non-sweater.”

Much of the western dancing we are familiar with can be characterized by a particular distribution of energy: maximal output or “attack” at the beginning of a phrase, followed by abatement and recovery at the end, with energy often arrested somewhere in the middle. This means that one part of the phrase—usually the part that is the most still—becomes the focus of attention, registering like a photograph or suspended moment of climax. In the Graham-oriented modern dance these climaxes can come one on the heels of the other. In types of dancing that depend on less impulsive controls, the climaxes are farther apart and are not so dramatically “framed.” Where extremes in tempi are imposed, this ebb-and-flow of effort is also pronounced: in the instance of speed the contrast between movement and rest is sharp, and in the adagio, or supposedly continuous kind of phrasing, the execution of transitions demonstrates more subtly the mechanics of getting from one point of still “registration” to another.

The term “phrase” can also serve as a metaphor for a longer or total duration containing beginning, middle, and end. Whatever the implications of a continuity that contains high points or focal climaxes, such an approach now seems to be excessively dramatic and, more simply, unnecessary.

Energy has also been used to implement heroic more-than-human technical feats and to maintain a more-than-human look of physical extension, which is familiar as the dancer’s muscular “set.” In the early days of the Judson Dance Theatre someone wrote an article and asked “Why are they so intent on just being themselves?” It is not accurate to say that everyone at that time had this in mind. (I certainly didn’t; I was more involved in experiencing a lion’s share of ecstasy and madness than in “being myself” or doing a job.) But where the question applies, it might be answered on two levels: 1) The artifice of performance has been reevaluated in that action, or what one does, is more interesting and important than the exhibition of character and attitude, and that action can best be focused on through the submerging of the personality; so ideally one is not even oneself, one is a neutral “doer.” 2) The display of technical virtuosity and the display of the dancer’s specialized body no longer make any sense. Dancers have been driven to search for an alternative context that allows for a more matter-of-fact, more concrete, more banal quality of physical being in performance, a context wherein people are engaged in actions and movements making a less spectacular demand on the body and in which skill is hard to locate.

It is easy to see why the grand jeté (along with its ilk) had to be abandoned. One cannot “do” a grand jeté; one must “dance” it to get it done at all, i.e., invest it with all the necessary nuances of energy distribution that will produce the look of climax together with a still, suspended extension in the middle of the movement. Like a romantic, overblown plot this particular kind of display—with its emphasis on nuance and skilled accomplishment, its accessibility to comparison and interpretation, its involvement with connoisseurship, its introversion, narcissism, and self-congratulatoriness—has fi-
nally in this decade exhausted itself, closed back on itself, and perpetuates itself solely by consuming its own tail.

The alternatives that were explored now are obvious: stand, walk, run, eat, carry bricks, show movies, or move or be moved by some thing rather than oneself. Some of the early activity in the area of self-movement utilized games, “found” movement (walking, running, etc.), and people with no previous training. (One of the most notable of these early efforts was Steve Paxton’s solo, Transit, in which he performed movement by “marking” it. “Marking” is what dancers do in rehearsal when they do not want to expend the full amount of energy required for the execution of a given movement. It has a very special look, tending to blur boundaries between consecutive movements.) These descriptions are not complete. Different people have sought different solutions.

Since I am primarily a dancer, I am interested in finding solutions primarily in the area of moving oneself, however many excursions I have made into pure and not-so-pure thing-moving. In 1964 I began to play around with simple one- and two-motion phrases that required no skill and little energy and contained few accents. The way in which they were put together was indeterminate, or decided upon in the act of performing, because at that time the idea of a different kind of continuity as embodied in transitions or connections between phrases did not seem to be as important as the material itself. The result was that the movements or phrases appeared as isolated bits framed by stoppages. Underscored by their smallness and separateness, they projected as perverse tours-de-force. Everytime “elbow-wiggle” came up one felt like applauding. It was obvious that the idea of an unmodulated energy output as demonstrated in the movement was not being applied to the continuity. A continuum of energy was required. Duration and transition had to be considered.

Which brings me to The Mind is a Muscle, Trio A. Without giving an account of the drawn-out process through which this 4½-minute movement series (performed simultaneously by three people) was made, let me talk about its implications in the direction of movement-as-task or movement-as-object.

One of the most singular elements in it is that there are no pauses
between phrases. The phrases themselves often consist of separate parts, such as consecutive limb articulations—"right leg, left leg, arms, jump," etc.—but the end of each phrase merges immediately into the beginning of the next with no observable accent. The limbs are never in a fixed, still relationship and they are stretched to their fullest extension only in transit, creating the impression that the body is constantly engaged in transitions.

Another factor contributing to the smoothness of the continuity is that no one part of the series is made any more important than any other. For four-and-a-half minutes a great variety of movement shapes occur, but they are of equal weight and are equally emphasized. This is probably attributable both to the sameness of physical "tone" that colors all the movements and to the attention to the pacing. I can't talk about one without talking about the other.

The execution of each movement conveys a sense of unhurried control. The body is weighty without being completely relaxed. What is seen is a control that seems geared to the actual time it takes the actual weight of the body to go through the prescribed motions, rather than an adherence to an imposed ordering of time. In other words, the demands made on the body's (actual) energy resources appear to be commensurate with the task—be it getting up from the floor, raising an arm, tilting the pelvis, etc.—much as one would get out of a chair, reach for a high shelf, or walk down stairs when one is not in a hurry. The movements are not mimetic, so they do not remind one of such actions, but I like to think that in their manner of execution they have the factual quality of such actions.

Of course, I have been talking about the "look" of the movements. In order to achieve this look in a continuity of separate phrases that does not allow for pauses, accents, or stillness, one must bring to bear many different degrees of effort just in getting from one thing to another. Endurance comes into play very much with its necessity for conserving (actual) energy (like the long-distance runner). The irony here is in the reversal of a kind of illusionism: I have exposed a type of effort where it has been traditionally concealed and have concealed phrasing where it has been traditionally displayed.

So much for phrasing. My Trio A contained other elements mentioned in the chart that have been touched on in passing, not being central to my concerns of the moment. For example, the "problem" of performance was dealt with by never permitting the performers to confront the audience. Either the gaze was averted or the head was engaged in movement. The desired effect was a worklike rather than exhibitionlike presentation.

I shall deal briefly with the remaining categories on the chart as they relate to Trio A. Variation was not a method of development. No one of the individual movements in the series was made by varying a quality of any other one. Each is intact and separate with respect to its nature. In a strict sense neither is there any repetition (with the exception of occasional consecutive traveling steps). The series progresses by the fact of one discrete thing following another. This procedure was consciously pursued as a change from my previous work, which often had one identical thing following another—either consecutively or recurrently. Naturally the question arises as to what constitutes repetition. In Trio A, where there is no consistent consecutive repetition, can the simultaneity of three identical sequences be called repetition? Or can the consistency of energy tone be called repetition? Or does repetition apply only to successive specific actions?

All of these considerations have supplanted the desire for dance structures wherein elements are connected thematically (through variation) and for a diversity in the use of phrases and space. I think two assumptions are implicit here: 1) A movement is a complete and self-contained event; elaboration in the sense of varying some aspect of it can only blur its distinctness; and 2) Dance is hard to see. It must either be made less fancy, or the fact of that intrinsic difficulty must be emphasized to the point that it becomes almost impossible to see.

Repetition can serve to enforce the discreteness of a movement, objectify it, make it more objectlike. It also offers an alternative way
of ordering material, literally making the material easier to see. That most theatre audiences are irritated by it is not yet a disqualification.

My Trio A dealt with the “seeing” difficulty by dint of its continual and unremitting revelation of gestural detail that did not repeat itself, thereby focusing on the fact that the material could not easily be encompassed.

There is at least one circumstance that the chart does not include (because it does not relate to “minimization”), viz., the static singular object versus the object with interchangeable parts. The dance equivalent is the indeterminate performance that produces variations ranging from small details to a total image. Usually indeterminacy has been used to change the sequentialness—either phrases or larger sections—of a work, or to permute the details of a work. It has also been used with respect to timing. Where the duration of separate, simultaneous events is not prescribed exactly, variations in the relationship of these events will occur. Such is the case with the trio I have been speaking about, in which small discrepancies in the tempo of individually executed phrases results in the three simultaneous performances constantly moving in and out of phase and in and out of synchronization. The overall look of it is constant from one performance to another, but the distribution of bodies in space at any given instant changes.

I am almost done. Trio A is the first section of The Mind Is a Muscle. There are six people involved and four more sections. Trio B might be described as a variation of Trio A in its use of unison with three people; they move in exact unison throughout. Trio A is about the efforts of two men and a woman in getting each other aloft in various ways while repeating the same diagonal space pattern throughout. In Horses the group travels about as a unit, recurrently repeating six different actions. Lecture is a solo that repeats the movement series of Trio A. There will be at least three more sections.

There are many concerns in this dance. The concerns may appear to fall on my tidy chart as randomly dropped toothpicks might. However, I think there is sufficient separating out in my work as well as that of certain of my contemporaries to justify an attempt at organizing those points of departure from previous work. Comparing the dance to Minimal Art provided a convenient method of organization. Omissions and overstatements are a hazard of any systematizing in art. I hope that some degree of redress will be offered by whatever clarification results from this essay.
